It's actually unbelievable what this silver capacitor does to the music!

It's like sitting in front of a massive wall of multilayered sound that comes from very deep black and quiet background and riches somewhere behind your head, sound of cymbals or piano has that beautiful glow around it and top-end notes sound so 3D as there are some ghosts around my head whispering to my ears.

It makes me listen to well-known tracks over and over again! wow!

I know it sounds crazy but the music becomes so tangible, involving and hallucinogenic that I have become a silver cast addict!. You get massive soundstage, deep and wide! super quiet background, big and well-shaped bass and best top-end ever, never bright or annoying. I was actually worried about that, thinking silver is known to be quite bright! But not in this case, Duelund silver sounds big and well balanced and takes you right into the show!

It's a real step up from an amazing copper family as the bigger price would suggest. Unfortunately, they are not cheap, but you definitely get what you paid for.

I rate it 10 out of 10!

So far the reference! and best audio capacitor that I know of.
